

A New Reason to Smile...

The exciting aspect about this new cosmetic appliance is that it does not only allow people to feel better about themselves but *it lets people choose which smiles they would like to have*. They are able to choose for example from such famous smiles as Britney Spears, Cameron Diaz or even Tom Cruise.

With this new exciting technology the material *allows people to feel comfortable and confident without any drilling or changing tooth structure*. Snap On Smile™ in the coming months will be the most exciting advancement in cosmetic dentistry in a long time. The material, being cosmetically enhancing yet flexible, allows it to adapt to the mouth. *It has a memory* and can bend and retract to the tooth structure, easily retaining its elasticity, without breakage or cracking. Unlike other products, there is **NO NEED FOR ANY ADHESIVES**. This feature allows a person to put on and take off their smile as many times as they wish, *sustaining a long lifetime of Hollywood smiles!*

Step 1

Step 2

Step 3

There has never been anything that can compare to this appliance. Other appliances, made by other materials, have been proven to be brittle and tend to crack upon reapplication.

The best part of this new technology is the **AFFORDABILITY**. Now a person who may have dental phobia can obtain that full mouth reconstruction without any invasive surgery, just for the cost of a single crown or porcelain veneer! The appliance can help anyone with his or her cosmetic dental needs. From a misaligned smile, to missing teeth or even ugly caps or veneers, the Snap-On Smile™ will make all these common problems obsolete! We recommend that you come in for a consultation and see if you are the candidate for this one-of-a-kind, state-of-the-art cosmetic appliance.
